

## Assignment 1 - Reflection and Notes

My experience with this assignment was great overall! It was insightful to build a 3-page website and to connect pages together, to keep continuity of colours, fonts, and themes throughout, and to make sure everything looked cohesive. While most of it was straightforward based on the tutorials provided in class, it was hugely beneficial to write the code from scratch to see where one can run into syntax, formatting, and general coding errors.

Some difficulties I ran into:

- Formatting the header (using containers within that small space) to ensure that everything fit correctly.
- Writing, testing, and deploying the validation JavaScript within my form.
- Placement of my picture on the homepage (I was not able to push it to the right side of the page sadly!)

I was able to get over these hurdles with the help of online resources (mainly W3 Schools) and tried to piece together the right code by trial and error. This allowed me to identify my missteps and learn along the way.

If I were to do it all over again, I would incorporate some more bold features in my online resume such as animations or videos to for a more lively user experience.
